

FEDERALLY-REINSURED PRODUCTS

MPCI AND ARPI PROGRAM OVERVIEW

Buying a crop insurance policy is one risk management tool available to all agricultural producers. Producers should consider how a policy works with their other strategies to ensure the best possible outcome each year. Our agents can assist you in making the best decision for your farming operation.

Available Products

Revenue Protection (RP) - Provides protection against revenue loss due to a decline in both crop prices and yields. A loss is realized if the harvest production plus any appraised production multiplied by the harvest price is less than the amount of insurance protection selected.

- You may also choose the **RP - Harvest Price Exclusion** option. If elected, the minimum crop insurance revenue guarantee will not be recalculated when harvest prices are released.

Yield Protection (YP) - Provides wide-spread protection against a loss in production below the predetermined guarantee.

- The insurance yield is based on a policyholder's actual production history, which is the average yield obtained on the insured unit for four to ten consecutive years.
- If the average yield per acre is less than the yield guarantee (due to an insurable cause of loss), an indemnity is paid.

Area Risk Protection (ARPI) - Provides protection against a loss of revenue or loss of yield in a county.

- ARPI provides flexibility in the data source used for establishing yields and has production reporting requirements for producers enrolled in area-based plans.
- Producers may select from three plan options to personalize their policy: **Area Revenue Protection (ARP)**, **ARP with Harvest Price Exclusion (ARP-HPE)** and **Area Yield Protection (AYP)**.
- If the final county yield or final county revenue falls below the trigger yield or trigger revenue, an indemnity is paid.

AVAILABILITY
